Summary

Information Technology graduate with a strong foundation in Python, Machine Learning, and Data Analytics, built through academic projects, professional training, and a hands-on internship. Skilled in building and deploying ML models, data preprocessing, and feature engineering, with working familiarity with Generative AI, LLM concepts, REST APIs, and Git. Seeking an entry-level AI/ML Engineer role to design, develop, and deploy AI-powered solutions.

Technical Skills

Programming : Python, SQL

Generative AI : Prompt engineering, LLM concepts, API integration, foundational RAG concepts.

Tools : Git, GitHub, VS Code, Postman

AI / Machine Learning : Machine Learning, Deep Learning (basics), Data Science, Scikit-learn, Model Evaluation & Optimization

Core Concepts : OOP, exception handling, database connectivity, HTTP methods, API status codes

Databases : MySQL

Python Libraries : Pandas, NumPy, Scikit-learn

Backend Development : Django, FastAPI, REST APIs, CRUD operations

Projects

Customer Churn Analysis and Prediction Using Machine Learning

Technologies : Python, Pandas, NumPy, Scikit-learn, Streamlit, Matplotlib, Git, GitHub

- Developed an end-to-end machine learning application to analyze customer churn patterns and predict customers at risk of leaving.
- Built reusable data preprocessing and feature-engineering pipelines using Pandas and NumPy, and trained a predictive model using Scikit learn.
- Developed an interactive Streamlit interface for customer-level churn predictions and analysis.
- Managed the development lifecycle using Git/GitHub, performing debugging, testing, and iterative improvements.

Visual Investigation AI Agent

Technologies: Python, Streamlit, Gemini/OpenRouter API, Prompt Engineering, Image Processing, REST APIs, JSON, Git, GitHub.

- Developing a Python and Streamlit application to analyze images of historical and cultural sites.
- Designing structured prompts to distinguish visible evidence, inferred details, and verification requirements.
- Working on LLM API integration, image preprocessing, web-search fallback, and API error handling.

Toll Booth Collection and Management System

Technologies : Python, OOP, JSON, Git, GitHub

- Developed a Python-based toll management system using object-oriented programming to handle vehicle registration, toll calculation, payments, and transaction records.
- Implemented vehicle-based toll pricing, FASTag, prepaid passes, peak-hour charges, discounts, and violation fines.
- Designed modular classes with JSON-based data storage, input validation, exception handling, and logging.
- Implemented role-based authentication and tested core business logic to improve reliability and data consistency.

Internship Experience

Data Analytics Intern, *Saiket Systems* 07/2026 – 08/2026

- Used Python alongside Excel and SQL to clean, process, and validate datasets for accurate reporting.
- Supported dashboard development by preparing analysis-ready data for Power BI.

Education

Bachelor of Information Technology, *D.B.J. College of Science, Arts & Commerce* 2022 – 2025
CGPI: 8.80

Higher Secondary Certificate (HSC – Science), *Govindrao Nikam Junior School & College* 2021 – 2022 | Sawarde
Percentage: 54.60%

Secondary School Certificate (SSC), *Shavajirao Laxumanrao Nikam Secondary School* 2019 – 2020 | Kosabi Phurus
Percentage: 87.88%

Certifications / Training

Python, Data Analytics & Data Science
iTpreneur

Data Analytics Internship Certificate
Saiket Systems
